PURPOSE

The American Institute for Cancer Research (AICR) is a national, non-profit organization dedicated to furthering knowledge about the relationship between diet and cancer. Through the funding of cancer research at independent hospitals, universities and research centers across the country, the Institute is helping to expand basic scientific knowledge about cancer, its causes, prevention and treatment. Through education programs for both health professionals and consumers, the Institute is helping to provide reliable, current information on cancer, cancer prevention, and cancer treatment, and is helping the public lower the risk they face from this tragic disease.
